INTRODUCTION TO NATIONAL FOREST RECREATION IN IDAHO

South of the main Salmon River in Idaho, which marks the northern boundary of the Intermountain Region of the Forest Service, lie the Boise, Challis, Sawtooth, Caribou, Payette, Salmon, and Targhee National Forests. These seven National Forests enfold 13,432,555 acres of diversified topography.

Presiding over abundant forests of pine, spruce, fir, and hemlock trees are the towering spires of rugged mountain ranges. From these peaks comes water destined to become part of the cool, placid lakes dotting the countryside or rushing torrents of Idaho's main rivers. These rivers are harnessed by dams in many places to provide power for the growth of Idaho. Though the mountain ranges provide splendid scenery, their most important product is lifegiving water.

From cloud-capped mountains to down-reaching gorges, recreation visits for a variety of purposes were made by over 3,000,000 people to southern Idaho Forests during 1962. The uplands of long-lasting snow annually draw skiers to 13 winter sports sites. Lakes and streams are an attraction to those who wish to boat, swim, water ski, or fish. The forests and rangelands provide a home for a wide assortment of wildlife, and a harvest of game is reaped during the hunting season.

It has long been the policy of the Forest Service to see that resources are used in the best long-time interest of the public, and this policy was given the approval of

Congress when it passed the Multiple Use and Sustained Yield Law of June 12, 1960. Protecting the watersheds and insuring an abundance of water makes possible the use of the other resources: forage, timber, wildlife, and outdoor recreation.

Two wilderness type areas have been established in southern Idaho -- the Sawtooth Primitive Area and the Idaho Primitive Area. As you visit these two areas, you will gain satisfaction from the knowledge that the Forest Service is protecting the primitive country so that you may enjoy it tomorrow, and your children and grandchildren may enjoy it in their time.

The Salmon River, which has dug one of the deepest gorges in North America, follows a tortuous course through the rugged Idaho Primitive Area. A boat trip down the Middle Fork of the Salmon River will take you through the Boise, Challis, Payette and Salmon National Forests.

Recreation on National Forest lands in Idaho not only provides relaxation and enjoyment for thousands, it also greatly benefits many local communities economically by attracting tourist trade. Under its Rural Areas Development Program the U.S. Department of Agriculture (of which the Forest Service is a part) is seeking to help people in rural areas and towns to analyze their economic opportunities and to improve conditions. In this connection, outdoor recreation along with the other National Forest resources will provide ever-increasing benefits.

BOISE NATIONAL FOREST

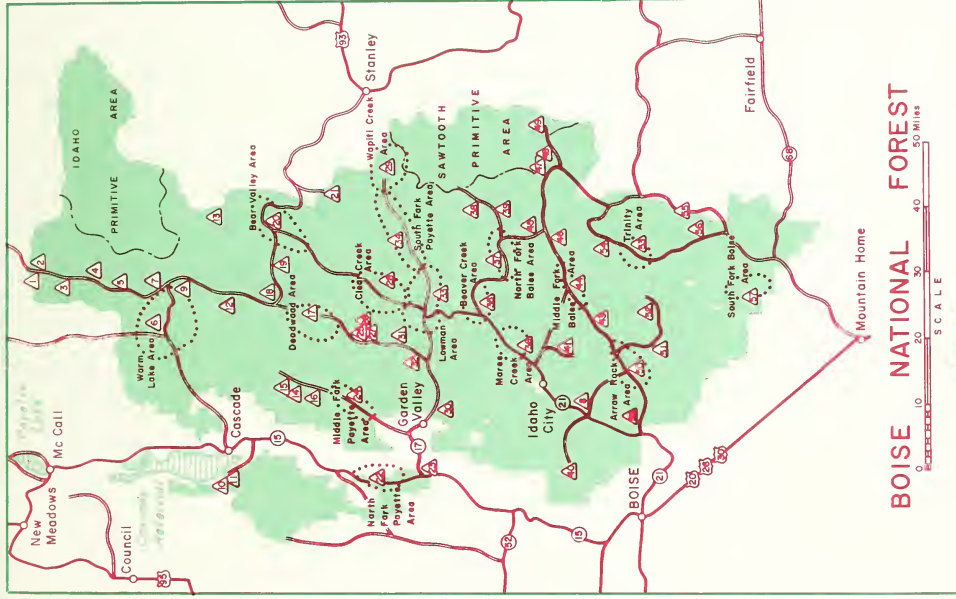

The forest takes its name from the Boise River. Early French Canadian trappers employed by the Hudson Bay Company termed the area "Les Bois," meaning wooded or woody. The first permanent settlement commenced in the 1862 gold rush era when Captain George Grimes and his party discovered placer gold on Grimes Creek in Boise Basin. Only two years later the Basin had an estimated population of 40,000.

To some people in those early days, the Boise National Forest area offered something more valuable than gold, however — the rich earth itself. Cultivation of land along the Boise and Payette River Valleys advanced the development of this area long before the rest of the state. Agriculture and industry in that area today depend on water flowing from the Boise and Payette watersheds.

Many areas on the forest have been improved for public recreation. Beautiful scenery, good fishing and hunting, and pack trips are a few of the outdoor opportunities. The Boise contains portions of the Idaho and Sawtooth Primitive Areas.

The Forest Service conducts a fast-growing program of campground construction and improvement, but strives to preserve the atmosphere of primitive beauty and seclusion.

NOTES FOR YOUR PROTECTION AND ENJOYMENT

Always carry an ax, shovel and bucket in your car for camping, putting out campfires and use in fire situations.

Know in advance where to go and whom to contact in case of emergency. Check in with the District Ranger.

Stay on roads and trails unless you are an experienced outdoorsman.

Keep an eye on children and pets.

Wear proper clothing and take first aid equipment on all outings.

Observe State and Federal hunting, fishing and boating laws.

Drive carefully in recreation areas and through campgrounds.

Be cautious about drinking from streams . . . clear water can be dangerous.

Check local fire rules and special requirements at the District Ranger's office.

Build campfires in designated grills, stoves and fire circles when using improved campgrounds. When camping in the open, scrape bare a circular area at least four times the size of the fire you will need. Be sure there are no branches overhead which might catch fire.

Put out your campfire by drenching with water, then turning over the material with the shovel, and drenching again. Soak the ground surrounding with water. If no water is available, mix earth with the fire, stir and mix more dirt until every spark is extinguished. Test with your hand to be sure.

Use available garbage cans for refuse, or in undeveloped areas bury garbage at least a hundred feet from streams. In Forest Service campgrounds, clean toilet facilities are provided for your comfort.

Damage to shrubs and wildlife is difficult to repair. We ask only that you treat these items and facilities provided for enjoyment as your own. In actuality, they do belong to you and the Americans of this and other generations to come.

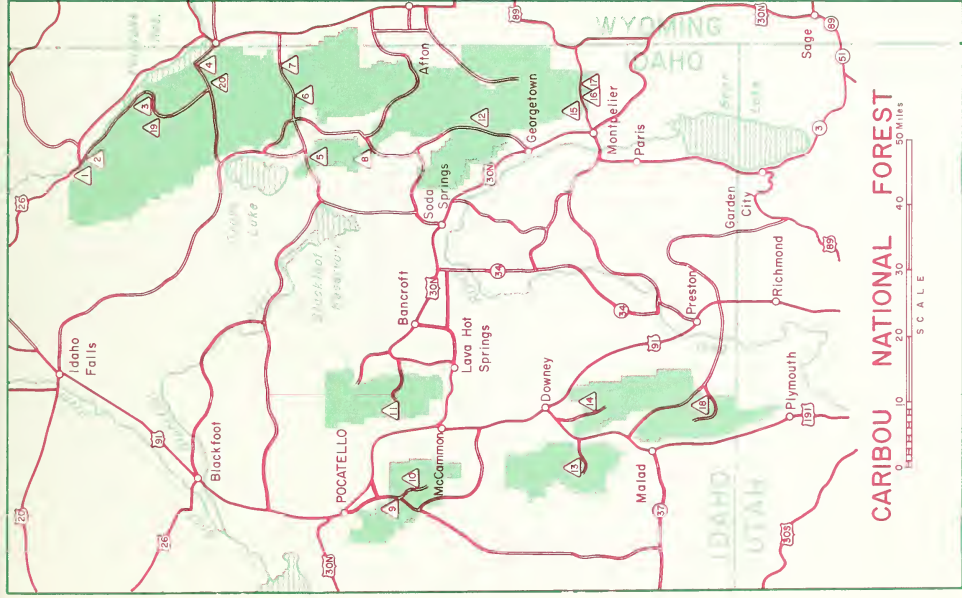

CARIBOU NATIONAL FOREST

The Caribou includes portions of Idaho, Wyoming, and Utah, and straddles the summit which separates the water of the Pacific and the Great Basin. It is a high plateau crinkled into beautiful valleys and mountain ranges rising to 10,000 feet.

Although one of the Intermountain Region's smaller National Forests — under a million acres — the Caribou is extremely rich in such natural resources as forage, timber, and wildlife. Immense phosphate deposits and other minerals combine with rapidly expanding recreational opportunities like those at Palisades Reservoir, to place the Caribou high on the industrial and recreational ladders.

Palisades Reservoir, lying between the Caribou and Targhee National Forests, provides watersports in a setting which compares with the beautiful lake country of Italy.

CHALLIS NATIONAL FOREST

The vast Challis with its nearly 2½ million acres is one of the nation's largest National Forest. Lying in central Idaho, it enfolds a rugged, unconquered terrain which reaches its zenith at the summit of Mount Borah 12,655 feet above sea level, taking in portions of the Idaho and Sawtooth Primitive Areas.

White men penetrated this country early in the last century to trap beaver and muskrats. Then followed mining prospectors, and after that tradesmen to serve the mining industry and livestock men. Rich in history, abundant in resources, the Challis affords livelihood and recreational satisfaction for a large segment of the public.

Boy Scouts and National Forests blend well.

PAYETTE NATIONAL FOREST

The Payette National Forest, located in west-central Idaho, has a gross acreage greater than Delaware and Rhode Island combined — nearly 2-1/2 million acres. This vast area is bounded on the north and south by the Salmon River and Boise National Forest. The Middle Fork of the Salmon River and Hell's Canyon of the Snake River, one of the deepest gorges in North America, marks its limits to the east and west. Scattered throughout this lofty, rugged terrain are numerous small lakes and streams. More than half of the 1-1/4 million-acre Idaho Primitive Area sprawls across the eastern part of the Payette. The forest provides numerous recreation opportunities — hunting and fishing, boating, swimming, camping, hiking, skiing, and pack trips into the remote areas. All recreation on National Forest is managed in harmony with the other important multiple uses — water, wood, forage, wildlife, and minerals.

Exhilaration personified. Water from the National Forests affords a wide variety of recreation opportunities.

SALMON NATIONAL FOREST

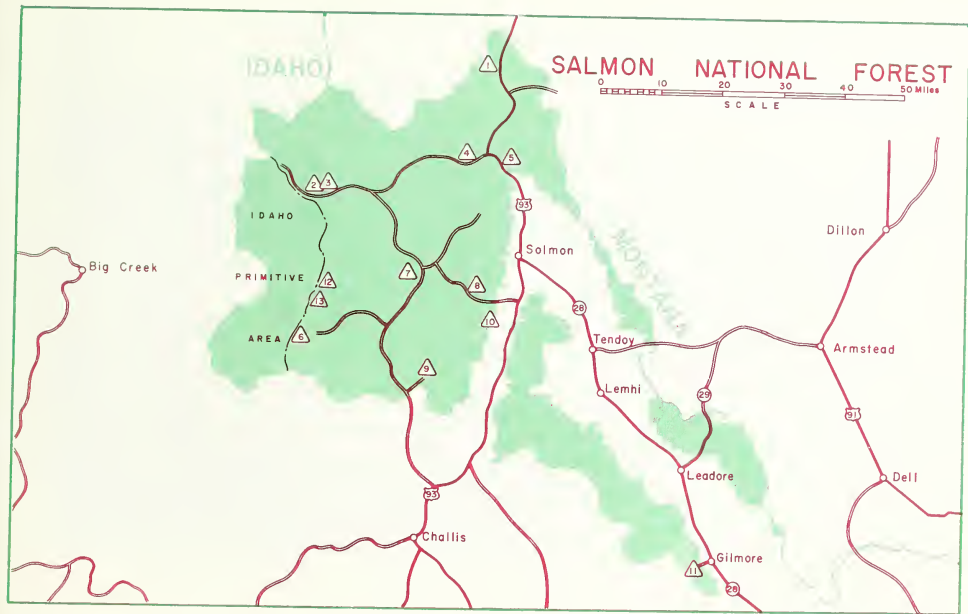

Modern history for the Northwest began in 1805, when Captain Meriwether Lewis of the Lewis and Clark expedition arrived at Agency Creek summit and looked down into the Lemhi Valley. It had been a bold and arduous journey, and its success was largely dependent upon the famous Shoshone Indian girl, Sacajawea. This was the first time, according to record, that white men had reached the great Continental Divide and viewed the Pacific slopes.

More than a century later the Salmon National Forest was established in this locale by President Theodore Roosevelt. It remains today as one of the nation's most picturesque and primitive areas. Containing nearly 1,800,000 acres, it extends 145 miles from Birch Creek Summit in the east to a few miles below the mouth of the Middle Fork of the Salmon River on the west, embracing a portion of the rugged Idaho Primitive Area.

Significant among its many recreational activities are big game hunting for deer, elk, antelope, bear, mountain sheep and goats, fishing, and boat trips — a challenge to every adventurous soul.

Boaters like these know the sound and surge of a river, the placid green deeps and the boiling of rapids under a mild-morning sun.

* accessible by boat only.

The high country of the Salmon National Forest is the source of water for many uses. It produces timber, crops, forage for livestock and game, water for industry and power, culinary water, fish habitat and recreational opportunity.

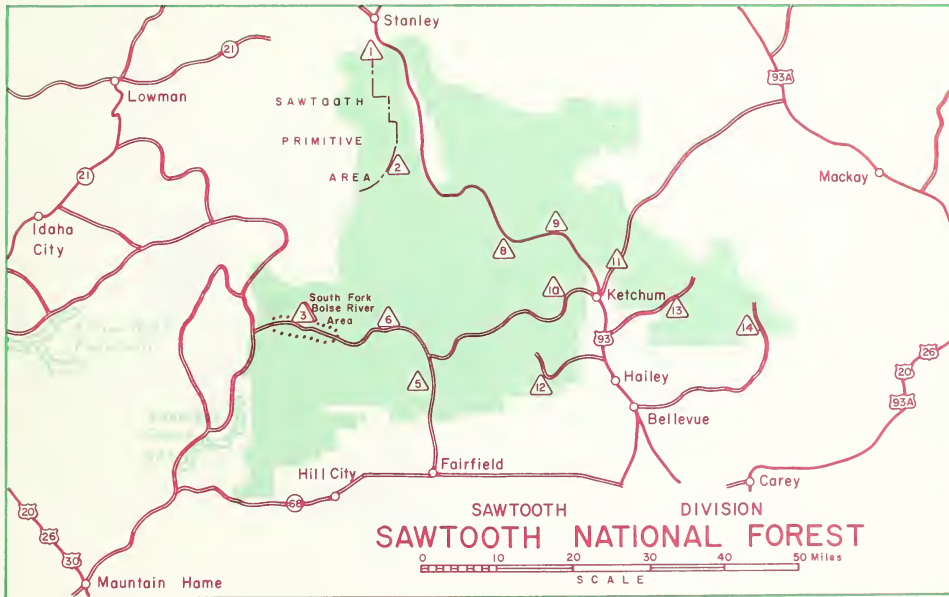

SAWTOOTH NATIONAL FOREST

The Sawtooth National Forest lies in two main divisions to the northward and south of the Snake River plains. Here in this nearly two million-acre public estate are watersheds drained by streams which feed the thirsty valleys, summer ranges for thousands of sheep and cattle, timber for homes and industrial uses, game and fish for sportsmen, restful recreation areas for campers and picnickers, and outstanding winter sports areas for skiers. Included within this forest is part of the superlative Sawtooth Primitive Area. The Sawtooth is part of your national heritage. Its lofty peaks, verdant slopes, and sparkling waters are yours to enjoy and protect.

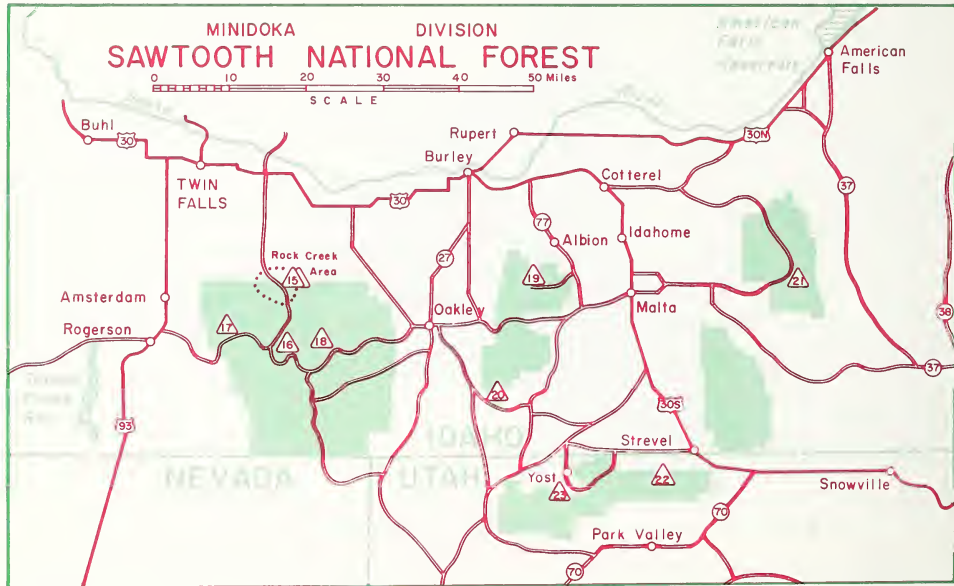

Alturas and Redfish Lakes in the Sawtooth Mountains are two of the nation's important spawning areas for the sockeye salmon. A land-locked form of the sockeye is commonly called kokanee. The Salmon River itself is an important spawning ground for the chinook salmon, which enters the Columbia River from March to July moving upward to spawn in streams of the Sawtooth National Forest in August and September.

Cradled within the Region's mountain summits are gem-like lakes filled with fish, and empty of swimmers except for the most hordy.

[illegible]

The Snake River Canyon is one of the "Must" sights on this Forest.

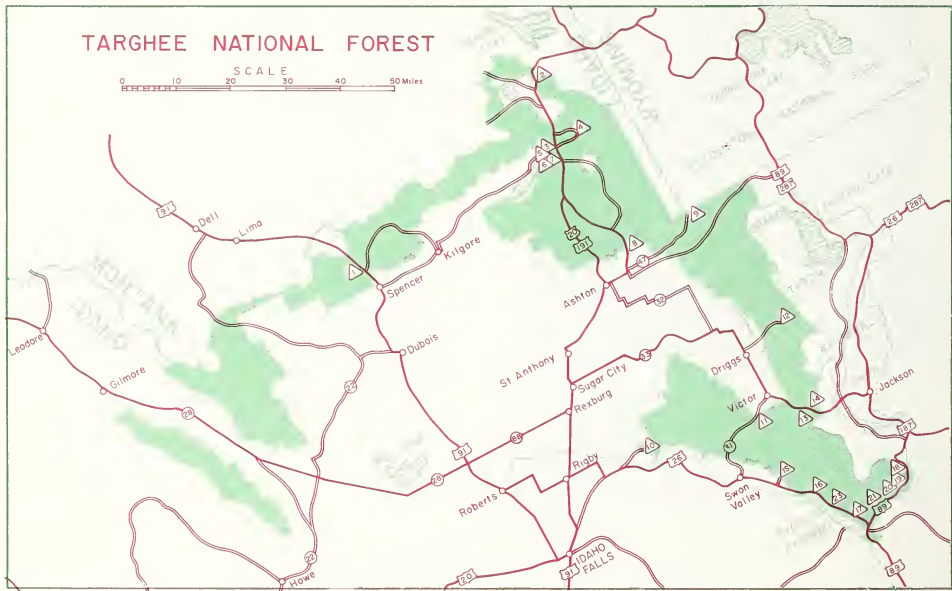

TARGHEE NATIONAL FOREST

The Targhee National Forest, containing 1,713,667 acres, embraces the high headwaters of the Snake River in Idaho, and extends in a great semi-circle from the Grand Canyon of the Snake on the east to the slopes of the Little Lost River on the west. North and south it reaches from the Snake River Valley to the Continental Divide and to the highly scenic western crest of the Teton Range.

A multiple-use national forest in every sense, the Targhee furnishes water, wood, forage, wildlife, recreation, and minerals for the public good. It enfolds Island Park, one of the most popular recreation areas in the West.

Points of particular interest to recreation visitors are: Big Springs, Henry's Lake, Island Park Reservoir, Henry's Fork, Upper and Lower Mesa Falls, Ashton Scenic Loop, Cave Falls, Teton Canyon, Grand Canyon of Snake River, Palisades Reservoir, and Alaska Basin.

MULTIPLE USE FOR

THE GREATEST GOOD

June 12, 1960, was a landmark in Forest Service history. That day the Multiple-Use and Sustained-Yield Law, Public Law 86-517, was signed by the President. It gave statutory recognition to fundamental principles of land management that had been practiced by the Forest Service throughout its long history. The law directs that the renewable surface resources of the national forests be developed and administered on a multiple-use and sustained-yield basis.

The term, multiple use, means different things to different people. This is only natural because the pattern of use varies greatly from place to place as topography, vegetation, soils and human needs vary. Then too, each user group is inclined to interpret multiple use in a way that places its particular interest in the most favorable position.

The objective of multiple use on the national forests, however, is to get the optimum combination of uses and services for the benefit of the American people. National forest resources include recreation, forage, timber, water, and wildlife. Minerals are a closely-related resource, but classed as non-renewable.

An essential of multiple use is positive, coordinated management of the several uses involved, and their deliberate, carefully-planned integration so they will interfere with each other as little as possible and supplement each other as much as possible.

The related practice of sustained yield means perpetuating a high-level annual or periodic output of the various renewable resources without impairing the land's productivity.
